

Agent Spark — Claude Code Instructions

READ FIRST

Read the file `agentspark-marketplace-prd.md` in this project root. This is the complete technical specification for Agent Spark, an AI agent marketplace. Do NOT start coding until you have read the ENTIRE document.

CRITICAL RULES

1. **Execute the 12-step build sequence in Section 18 IN ORDER.** Do not skip steps. Do not combine steps. Complete and test each step before moving to the next. If I say "start step 1" you do step 1 only.
2. **Ask me before making architectural decisions not covered in the PRD.** If something is ambiguous, ask. Do not guess.
3. **Follow the exact tech stack specified.** Next.js 14 App Router, Hono, Supabase, TypeScript, Tailwind + shadcn/ui. Do not substitute frameworks or libraries unless I approve.
4. **Follow the exact file structure.** The monorepo structure in Section 3 is the source of truth. Put files where the PRD says they go.
5. **Design system is non-negotiable.** Every component must use the glassmorphic design system from Section 16. Plus Jakarta Sans for headings, DM Sans for body. Glass cards with backdrop-filter blur. Multi-layer shadows. Lucide React icons only (size 20px, strokeWidth 1.75). Minimum 24px card padding, 48px between sections. If it doesn't look premium, redo it.
6. **The marketplace IS the homepage.** There is no landing page. No hero section. No marketing copy. Users land directly on the agent grid with sidebar navigation. See Section 15 for the exact layout.
7. **Auth wall is a MODAL, not a page redirect.** Unauthenticated users can browse freely. The auth modal only appears when they try to rent, connect, or publish. See the AuthWall component in Section 15.
8. **Two sidebar modes.** Marketplace Mode is the default. Creator Studio is a separate toggle. The sidebar content swaps when switching modes. See Section 15 for details.
9. **After completing each step, give me a summary of what was built and what to test.** I will confirm before you move to the next step.

HOW WE WORK

- I will tell you which step to execute: "Do step 1" or "Start step 3"
- You complete that step fully, following the PRD specification
- You tell me what was built and how to test it
- I confirm or request changes
- Then we move to the next step

START

Begin by reading the full PRD, then wait for my instruction on which step to start.
